

Methods and Medical Devices used by Dr Meletani

The **Biocybernetic Instrumental Medicine (sometimes called Bioresonance Medicine)**, was developed in Germany in the early fifties by groups of physicians interested on Holistic medicine.

One of the most important among them was Dr. Reinhold Voll (1909-1989) who founded the International School of EAV that brings his name. From this, in the following decades, were developed other branches of the Biocybernetic Medicine, such as Bioresonance therapy called MORA and the Test of the Vegetative Skin Reflex according to Schimmel (so-called VEGA-test).

EAV represents a synthesis, made more than fifty years ago by the above mentioned Reinhold Voll, among the Traditional Chinese acupuncture, the Western Clinical Medicine, the Homeopathic, Homotoxicologic and Isopathic pharmacology.

The essence of the method consists on verifying, using a probe of an electronic device, the bioelectric situation of the Acupuncture points, besides new points and Meridians(or Vessels) discovered by Voll and by other researchers.

The bioelectric set up, given by the skin values of resistance, is showed on a special screen with a pointer or indicator.

The physiological resistance value of a point corresponds to an organ in a bioenergetic balance, that means a healthy one. In this case it equals to 50 SU (arbitrary scale units that one can read on the screen).

The most important criterion for a diagnostic evaluation is however the so-called Indicator Drop: this occurs or takes place when the pointer of the device, while you are pushing with the probe with the same intensity, arrives at the highest value and then goes down until it stops at a lower value (for instance a drop from 80 to 40 SU).

Another possibility given by the **EAV** is the opportunity to perform the Drug or Medication Testing: by this we can check if a specific remedy is suitable to cure the patient's pathology.

From the therapeutic point of view I use also an other device called **MORA** Therapy. Such device allows, using the electromagnetic information coming from the organism, which correspond to the energetic situation of the moment, to elaborate and to modulate electronically, with specific filters, these frequencies and therefore to send back them to the patient.

It provokes a biophysical change first, and then a biochemical one, that start the recovery process.

The principle at the base of MORA is the cancellation of the pathological information recorded in the organism. Such method has a theoretical, methodological and clinic-therapeutic implication of utmost importance in medicine.

In fact the biophysical principle of this method is so deeply that it requires almost a total change in the conceptualization of clinical problems.

CLINICAL INDICATIONS FOR THE INTEGRATED AND COMPUTERIZED ELECTROACUPUNCTURE ACCORDING TO VOLL (EAVI).

The computerized program of EAVI comes from the United States and is called ACUPRO II. It was designed by Douglas Leber: it allows to carry out a Test even more quick and accurate, since the information of the electromagnetic frequencies of thousands homeopathic, phytotherapeutic and other remedies, have been electronically stored in the computer hard disc. Thus it is no more necessary for the therapist to possess a great number of vials for testing: everything is ready in order to get a diagnosis and a therapy.

But, which are the main clinical indications of this test?

From the gathered experience in the last few decades by thousands of doctors who use it all over the world, we can give a list of diseases in which the best results are obtained.

1. Allergic Diseases, included Food Allergies and Intolerances. In this group we have: the allergic rhinoconjunctivitis or hay fever, bronchial asthma. Moreover, in dermatology: the allergic dermatitis, the eczemas, the urticarias(hives), the acne and some kind of psoriasis.
2. Gastro-enteric apparatus: gastroduodenal disease and duodenal chronic ulcer, dyspepsia, constipation and chronic diarrhoea.
3. Cardio-circulatory system: functional problems of the cardiac rhythm, primary myocardial ischemia.
4. Liver and gallbladder diseases: chronic hepatitis, insufficiency of gallbladder and biliary ducts, hepatic chronic poisonings from chemical substances.
5. Genitourinary apparatus: chronic cystopyelitis and glomerulonephritis, kidney stones, prostatitis, vaginitis, salpingitis, ovarian cysts, dysmenorrhoea, menstrual problems, some kinds of sterility not referred to an anatomical problem.
6. Endocrine system: light hyperthyroidism, hypothyroidism of light entity, type II diabetes mellitus.
7. Musculo-Skeletal system: cervicobrachial neuralgia, low back pain not caused by herniated disc, pains caused by rheumatism or arthritis.
8. Nervous system: migraine, neuralgias, anxious-depressive syndromes not of endogenous origin, neurovegetative dystonia.
9. Neoplastic degenerative disease at the first stage: the biological therapy tested with the EAVI can help the classic therapies, with the possibility to remarkably attenuate the chemotherapy and radiotherapy side effects.
10. Infectious diseases of the airways: chronic pharyngotonsillitis , chronic rhinosinusitis and bronchitis, especially in children.
11. Dentistry: It is possible to identify and to cure the chronic gingivitis, the dental foci, and can be given an aid for periodontitis and parodontosis.

Moreover, the harmful effects by an intoxication or intolerance to the dental materials can be greatly reduced.
